Attention: Gregory McCreath, Customer Service Manager

Mr. Patrick Terrelonge
Infochannel Limited
Shop No. 24 b
New Kingston Shopping Centre
30 Dominica Drive
Kingston 5

Dear Mr. Terrelonge:

Sabotage of ADSL Service

1. BACKGROUND

Further to my letter of 26 June 2007, [\[1\]](#) I continue to be subjected to episodic denial of ADSL service orchestrated by the criminal enterprise discussed in the latter, with intent to sabotage my ongoing research in engineering and law, and the filing of complaints with the ICC and other authorities. You will recall that I am the complainant and a material witness in an ongoing criminal transaction concerned with the maintenance and cover-up of the practice of apartheid at the University of Aberdeen, where my Honours dissertation "Interactive Computer Package Demonstrating: Sampling Convolution and the FFT" was excluded from my academic record, fraudulently designated as "not achieved", and the work appropriated for a commercial venture with the Royal Dutch/Shell Company, and to confer a doctoral award on a white student.

The denial of ADSL service, commissioned in combination with employees of Cable and Wireless Jamaica Limited (C&W), is part of a sophisticated programme of cover-up subscribed to by government officials (here and in the United Kingdom) utilising a 24-hour stalking operation that includes eavesdropping on my telephone, hacking into credit card accounts to discredit me, hacking into my computer, and wholesale bribery of public officials and others. I believe that the criminal transaction now includes 4 murders encouraged, aided, and abetted by the obstruction of justice by the International Criminal Court and other law enforcement agencies with jurisdiction. By doing nothing, the law enforcement agencies maintain the cover-up facilitating the stalking, harassment, and continuing threat to

my life. The attached Appendix (also included in [1]) is a list of all reports filed with law enforcement and other authorities – which have been effectively disregarded. [2]

My consistent complaints to Infochannel – particularly that of [26 June 2007](#) - have apparently met the same fate as the criminal complaints, as these have evidently been disregarded. I have no doubt that MIT Professor James Williams has been speaking with you at Infochannel, in order to persuade you to take no action in the matter. Again, Williams is the front man for the operations of the criminal enterprise in Jamaica. Williams gives the criminal operations the appearance of legitimacy – on account of his race, and under colour of his office at the prestigious Massachusetts Institute of Technology.

Infochannel director Michael Terrelonge has first-hand knowledge of the cover-up, as the programme of stalking and sabotage was active while I was contracted to Alcan Jamaica in 1988, during which time University of Aberdeen Professor John R. Smith engaged in covert and subversive communications with Alcan personnel.

2. EVIDENCE OF SABOTAGE

The evidence of sabotage is unquestionable. Your Infochannel customer service (ICS) personnel have a record of my complaints. Sometimes the disconnections are intermittent, but applied throughout the entire day (see, e.g., my email messages of 28 June, and 1 August 2007 to Gregory and Andre). On 26 June 2007, Gregory, himself, ran checks on my ADSL connection [1] as have other ICS staff, the most recent being Kamilah Morrison on 19 August and 2 October 2008. In each instance ICS verified a data blackout from C&W.

ICS have wasted my time and theirs trying to account for these blackouts by attributing them to other causes. On conclusion of the modem check with Kamilah on 19 August 2008, for example, my internet light switched on. Andre suggested that perhaps the problem was the cables, but as I explained to Kamilah, my telephone line is bugged by the criminal enterprise, who had simply used their C&W agents to switch the service back on at the opportune time.

In some instances, I have found it too much of a burden to interrupt my work to make reports to ICS. On Monday 11 August 2008, I complained to Andre about yet another blackout that extended throughout the morning. In the afternoon, my internet light would go out for periods of up to 3 minutes, stay on for a few seconds, then blackout again. Instead of interrupting my work to perform yet another modem check with ICS, I opted to discuss the problem informally with one of the managers at C&W - and ADSL resumed, uninterrupted for the rest of the day. Often in the early morning on a weekend (usually around the end of the month) my ADSL service is switched off, only to be reinstated just before 10:00 am when ICS opens for business. I believe, however, that I have reported most instances of extended periods of total loss of service.

The following are my notes on the schedule of events related to the disruption of my ADSL service over the period 29 September to 8 October 2008:

- **Monday 29 September**

Two of the four telephone extensions stopped working after hurricane Gustav; there was no dial tone from work side of master jack.¹ I called 115 to report the defective outlets. Disheartened by Infochannel's 1MB webspace provision with ADSL Lite, I searched the Internet to compare webspace offerings by other ISPs. From these searches I discovered that there were free web hosting services.

- **Tuesday 30 September**

I searched for further information comparing various free web hosting and file storage service providers: Humyo, Skydrive, Yahoo Geocities, Google, etc. Decided on Google Sites, and began construction.

- **Wednesday 1 October**

I decided to construct two Google Sites: "Caprica" for the law project, and "Code Art Now" primarily for posting my computer code. I uploaded examples of my Honours dissertation code in C, and all my solutions to Part3 of Lisp 3rd edition by Horn and Winston.

- **Thursday 2 October**

I woke up to find that that I had no ADSL service. I ran through the modem check with Kamilah Morrison. Kamilah reconfigured the modem but the ADSL service was not restored. Kamilah reported that she observed no communication of data from C&W to my account.

- **Friday 3 October**

Still no ADSL service. The telephone extension in the study suddenly stopped working. With two other extensions not working this left a single extension for both the Internet and the telephone. I had a long discussion with Gregory. He suggested that I should bypass the splitter by plugging the modem directly into the wall. ADSL service became available with the splitter bypassed. Gregory concluded that the problem was the splitter. I advised Gregory that C&W were manipulating the line remotely; that I did not believe that the splitter was defective, but that C&W had configured the telephone line so that ADSL would fail once the modem was connected through the splitter. I also advised Gregory that C&W had disabled the extension in the study in order to force me to use the splitter so as to make the claim that the problem was due to the splitter malfunctioning.

- **Saturday 4 October**

ADSL service continued to be available with splitter bypassed. C&W again switched off my ADSL about 6:30 am - just after ICS closed for the day.

¹ Not knowing how the master jack was set up, I had mistakenly informed Gregory that it was the test side that had no dial tone.

- **Sunday 5 October – Monday 6 October**

ADSL was up and running all day.

- **Tuesday 7 October**

I checked at 6:42 am; the splitter was again working. ADSL was available all day with the modem connected through the splitter. A C&W technician came to perform repairs. He repaired the three extensions without dial tone, but said he had no equipment to replace the master jack – the work side of which he found decoupled.

- **Wednesday 8 October**

MY ADSL service ran uninterrupted in the morning, but became intermittent in the afternoon. I discovered that the telephone no longer worked when connected through the splitter, even when all four lights are on and stable. I reported to customer service and also advised Gregory, himself, that the criminal agents were obviously trying to falsely compose the appearance of a defective splitter. The C&W technician failed to return to replace master jack.

- **Wednesday 15 October**

A C&W agent called to follow up on repairs by technician. The agent asked specifically about the Internet. The telephone now has dial tone when connected through the splitter.

3. COSTS

The cost of the hijacking of my ADSL service extends well beyond the value estimated by reference to the hourly rate. Denial of service results in derailment of my research and other work, leads to frustration, and is a net contributor to the cumulative stress that impacts my health and well-being. Accordingly, the measure of the impact is inestimable, but in my discussions with Gregory we agreed to two months of ADSL (Lite) service as restitution. As of this month, I downgraded to your Colt package, of which I became aware only on the 27th of September.

I also purchased, yesterday, your service for domain name registration as Infochannel is better able to choose a recognised and reliable authorized issuer. From the web, the cost for such registration begins at about US \$13.50, and in this respect I made a payment to Infochannel through Paymaster for US \$20.00 (J \$1700). Please advise me of the actual cost of registration on receipt of this letter.

4. ACTION

University policy, everywhere, mandates failure or rescission (when the degree has already been awarded) of a BSc. Honours degree in the case of fraudulent submission of a dissertation (moreover, one

for which the maximum mark is 1/3 of the total Honours mark) – not publication of forgeries as certificates purportedly awarding a degree, nor 25-year programmes of stalking, bribery, coercion, harassment, fraud, and further crime necessitating enormous investments of time, money, and other resources. To claim not to recognise this - as the majority of Jamaicans concerned have done - is to be complicit in the matter.

My ADSL service is sabotaged at strategic times, for example on 13 July 2007 (see email message to Gregory and Andre) while I was attempting to access the MIT CSAIL Technical reports web page at <http://dspace.mit.edu/handle/1721.1/29807/browse-date>. The hijacking this month was a direct response to my creation of the websites, which will publish evidence against the defendants. The broader criminal transaction of apartheid enjoys the support of factions of the British Government, a former Minister of which, the Right Honourable Henry McLeish (former First Minister of Scotland), is a defendant. In Jamaica, I have had discussions concerning the matter with the Prime Minister Bruce Golding (when he was leader of the NDM), former Ministers Horace Clark, Carlton Davis, Seymour Mullings, Donald Buchanan, Easton Douglas, Anthony Hylton, the former DPP Kent Pantry, and Attorney General A. J. Nicholson – all of whom were undoubtedly contacted by Williams.

Reliance on mere C&W service personnel (who are evidently cooperating with Williams) to rectify the problem only serves to perpetuate the criminal enterprise's defrauding of my service. Given the political pedigree of the parties involved it should be clear to you that you have a legal obligation to bring this matter to the attention of your counterpart at Cable and Wireless in order to make a credible attempt to bring an end to these attacks. I expect you to do so, and to advise me accordingly – without delay.

Yours sincerely

Adrienne Gaye Thompson
